## Number

## Sets and Operations

## William's Pears

William's pear tree has lots of pears this autumn. He has collected some and wants to give them away to his friends, but he wants to be fair. He has figured out that his pears can be shared with $2,3,4,5$ or 6 people, with everyone getting the same share. Can you figure out a number or some numbers which might work for this problem?

Can you make your own problem?

| Element | g <br> The learner | h <br> The learner | i <br> The learner | j <br> The learner |
| :---: | :--- | :--- | :--- | :--- |
| Applying and <br> Problem-solving | Solves problems involving <br> multiplication and division <br> [using real-life contexts <br> where appropriate]. <br> Applies a range of <br> strategies, including visual <br> strategies, to solve <br> problems involving more <br> than one operation. | Solves and completes <br> practical tasks and <br> problems involving <br> multiplication of whole <br> numbers | Uses a variety of <br> strategies to solve <br> addition, subtraction, <br> multiplication and division <br> problems involving <br> decimal and whole <br> numbers | Uses estimation when <br> solving problems involving <br> operations with whole <br> numbers, decimals and <br> percentages, to help judge <br> reasonableness of a <br> solution. |

National Council for Curriculum and Assessment (2022, p. 55)

| Grading Rubric | What learners can typically do |  |  |  |
| :---: | :--- | :--- | :--- | :--- |
| Applying and <br> Problem-solving | g <br> The learner | h <br> The learner | i <br> The learner | J The learner |
|  | May explore multiples of <br> the given numbers and <br> checks each against all <br> numbers of people. | As for learner g. May <br> record their work using a <br> list, table or images of <br> groups. Begins to organise <br> systematically. | As for learner h. Looks for <br> patterns in attempted <br> solutions and can <br> articulate why some <br> numbers (e.g. 30, and <br> perhaps where 30 is <br> multiplied by an odd <br> number) cannot be correct <br> solutions. | As for learner i, also <br> analyses common <br> multiples of 4, 5, and 6 to <br> generate possible <br> solutions. Recognises <br> that 2 and 3 can be <br> ignored as they are <br> contained in all solutions <br> for 4 and 6. Can articulate <br> that all multiples of 60 are <br> solutions and present an <br> argument why. |
